Introduction

The Santa app by North Pole Security leverages the macOS Endpoint Security framework to provide an app execution control layer to macOS.

[Santa Documentation Site](#)

Requirements

In Intune sign in as a member of the *Global Administrator* or *Intune Service Administrator* Entra ID roles

Santa App Installation

Download the latest version of Santa at [Releases · northpolesec/santa · GitHub](#)

In the **Intune UI**

Apps -> macOS

Click **+ Create**

From the drop down menu select **Other -> macOS App (PKG)** then click **Select**

Click **Select app package file** and choose the **santa** pkg you downloaded in the previous step

Under **App Information** set

Name = Santa

Description = Santa App Control

Publisher = northpole.security

Click **Next** then **Next**

Set **Minimum operating system** = macOS Sonoma 15.0

Under **Detection Rules** leave the defaults and click **Next**

Under **Assignment** choose **Add all devices** then click **Next** then **Create**

Configuration Profiles

Background and Login Items Profile

This profile ensures that the Santa Daemon always runs and can't be disabled by the user

In the **Intune UI**

Navigate to **Devices -> macOS -> Configuration**

Click **+ Create -> + New Policy** to Create a new profile

Click **Profile Type -> Settings Catalog** then **Create**

Give the profile a name e.g. Santa – Background and Login then click **Next**

Click **+ Add settings** and choose setting from **App Store, System Policy** and select the settings in the screenshot below and close the **Settings Picker**

1 Configuration settings **2** Review + save

[+ Add settings](#) ⓘ

^ Login

[Remove category](#)

Service Management - Managed Login Items

[Remove subcategory](#)

Configure the Service Management – Managed Login Items payload to manage the background tasks and items that are opened when users log in.

i 11 of 13 settings in this subcategory are not configured

Rules ⓘ

☐ Santa Background Items	Team Identifier	ZMCG7MLDV9	ZMCG7MLDV9	+ Edit ins

Click **Next** then on Scope Tags click **Next**

In Assignments Click **+ Add all devices**

Click **Next** then Click **Create**

Notifications Profile

This profile sets the Notification settings for Santa so the user is not prompted to do so

In the **Intune UI**

Navigate to **Devices -> macOS -> Configuration**

Click **+ Create -> + New Policy** to Create a new profile

Click **Profile Type -> Settings Catalog** then **Create**

Give the profile a name e.g. Santa – Notifications then click **Next**

Click **+ Add settings** and choose setting from **App Store, System Policy** and select the settings in the screenshot below and close the **Settings Picker**

^ User Experience

Notifications

Configure the Notification payload to manage notifications for specific applications, such as blocking notification previews or controlling how notifications appear when devices are unlocked.

Show In Notification Center ⓘ	True
Notifications Enabled ⓘ	True
Show In Lock Screen ⓘ	True
Bundle Identifier ⓘ	com.northpolesec.santa
Badges Enabled ⓘ	True
Alert Type ⓘ	Temporary Banner
Sounds Enabled ⓘ	False
Critical Alert Enabled ⓘ	True

Click **Next** then on Scope Tags click **Next**

In Assignments Click **+ Add all devices**

Click **Next** then Click **Create**

Privacy Preferences Policy Control Profile

This profile allows Santa Full Disk Access

In the **Intune UI**

Navigate to **Devices -> macOS -> Configuration**

Click **+ Create -> + New Policy** to Create a new profile

Click **Profile Type -> Settings Catalog** then **Create**

Give the profile a name e.g. Santa – PPPC then click **Next**

Click **+ Add settings** and choose setting from **App Store, System Policy** and select the settings in the screenshot below and close the **Settings Picker**

Privacy Preferences Policy Control

Configure the Privacy Preferences Policy Control payload to manage the settings in the Privacy pane of Security & Privacy preferences on devices.

Services ⓘ

Allowed ⓘ	True
Static Code ⓘ	False
Code Requirement ⓘ	identifier "com.northpolesec.santa.daemon" and anchor apple generic and certificate 1[field.1.2.840.113635.100.6.2.6] /* exists */ and certificate leaf[field.1.2.840.113635.100.6.1.13] /* exists */ and certificate leaf[subject.OU] = ZMCG7MLDV9

Click **Next** then on Scope Tags click **Next**

In Assignments Click **+ Add all devices**

Click **Next** then Click **Create**

System Extension Profile

This profile allows Santa to install a System Extension

In the **Intune UI**

Navigate to **Devices -> macOS -> Configuration**

Click **+ Create -> + New Policy** to Create a new profile

Click **Profile Type -> Settings Catalog** then **Create**

Give the profile a name e.g. Santa – System Extension then click **Next**

Click **+ Add settings** and choose setting from **App Store, System Policy** and select the settings in the screenshot below and close the **Settings Picker**

System Extensions

Configure the System Extensions payload settings for enrolled devices. Installing or removing this payload can change the state of system extensions on the Mac. If a containing app activates a system extension, and the system extension is in a pending state, installing a payload that allows the extension completes the activation process. If a system extension is active, removing a payload that allows the extension deactivates that extension.

Team Identifier ⓘ	ZMCG7MLDV9
Allowed System Extensions ⓘ	com.northpolesec.santa.daemo
Non Removable System Extensions ⓘ	ZMCG7MLDV9
ANY ⓘ	com.northpolesec.santa.daemon
Team Identifier ⓘ	ZMCG7MLDV9
Allowed System Extension Types ⓘ	EndpointSecurityExtension

Click **Next** then on Scope Tags click **Next**

In Assignments Click **+ Add all devices**

Click **Next** then Click **Create**

Sample Santa Policy Config

In the **Intune UI**

Navigate to **Devices -> macOS -> Configuration**

Click **+ Create -> + New Policy** to Create a new profile

Click **Profile Type -> Templates** then **Custom** then **Create**

Give the profile a name e.g. Santa – App Config then click **Next**

For **Custom configuration profile name enter** Baseline App Config

Set **Deployment Channel** to **Device Channel**

Upload the Custom Configuration profile file. Use filename Santa – Policy Config.mobileconfig

Under **Assignments** click **+Add all devices**
